

Lab Practical 02 – Project Selection & Supervisor feedback

Each UX team should research and find a Mobile app Fill

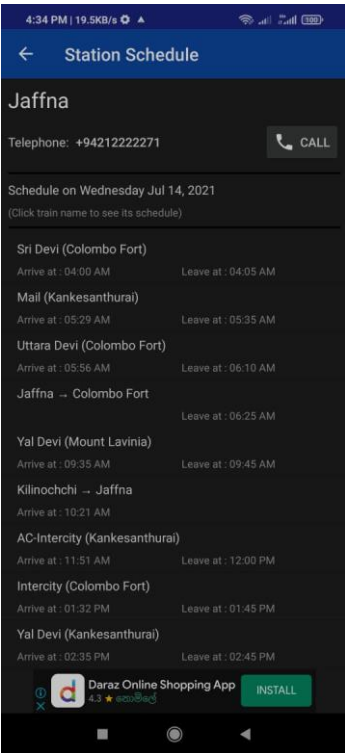

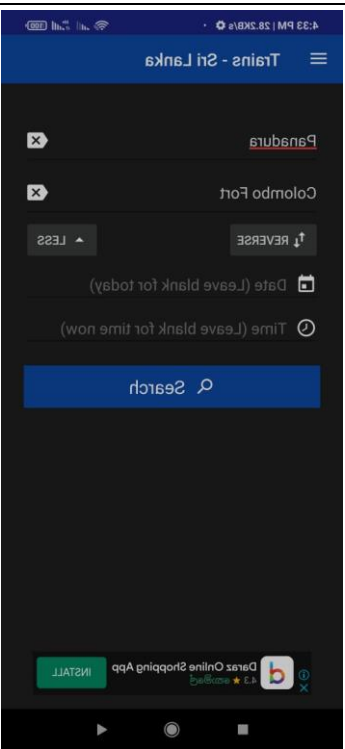

the following table to show your findings

Mobile App	Sri lanka train schedule
Name:	Train Sri lanka
Developer	Sri lanka railway department
Purpose:	Fastest and Smartest Train Booking, online payment, Ticket charge's view, Notice, Login, registration, user feedback functions. Train Sri Lanka (Formerly 'Train Finder - Sri Lanka') helps you to smartly search trains in Sri Lanka and view the timetables of both trains. It gives you the list of options that you can travel between any two stations.

Competitor Mobile apps

Sri lanka train schedule

Good design	
Home	there are only few things in the interface. That means only typing the starting place and the destination place. The color for the main button is very size, and the size of that button is ok. Background color is normal to our eyes. As well as blue and the black color is matching very well.
Menu	Nice picture in the upper part with the name of the train application. In the lower part are consisting with option buttons clearly. Having attractive spaces between buttons. Those buttons are with small icons.
Icons	Small icons give reader or user to get a clear idea about the application. Anyone can understand with those small icons.
Timetables	Having clear table with suitable spaces. Clearly mention timetables with details can give more information to users about the train arrivals.

Design issue	
1. Font issue	<ul style="list-style-type: none"> • All the fonts are in same size and same color. should want to available in different size and color • Fonts are not pleased as well. In this app has Lots of font margin padding issues
2. Background issue	<ul style="list-style-type: none"> • All interfaces have not a proper background Design and color • In this app Font color and background color Look like same therefore hard to read the Letters
3. Button issue	<ul style="list-style-type: none"> • Buttons also not designed well • All buttons are same color and design • Between button also not given proper margin And padding • We can't clearly identify button's icons
4. List view issue	<ul style="list-style-type: none"> • In this app in list view also not given lists margin and paddings • The list view has don't have container
5. Text box issue	<ul style="list-style-type: none"> • There is an no enough space within the text Boxes • When we search some details about train using search bar, the search bar didn't give any suggestion about train details
